

AUTOMATION MANUFACTURING INTRALOGISTICS

THERE FOR YOU **WORLDWIDE!**

**HIGHEST
AVAILABILITY**

WORLDWIDE, AROUND THE CLOCK, 365 DAYS A YEAR

YOUR PARTNER FOR MATERIALS HANDLING, MATERIAL FLOW AND INTRALOGISTICS

WITH US YOU ARE IN GOOD HANDS

YOUR AMI SERVICE TEAM

+49 2662 9565-0

YOU AWAIT THE HIGHEST AVAILABILITY
AND A TROUBLE-FREE PLANT?

24 HOURS DAILY

7 DAYS A WEEK

24/7

TAKE ADVANTAGE OF OUR
SERVICES AND EXPERIENCE.

A well-trained and motivated team of service technicians is available to you around the clock, 365 days a year.

OUR PHILOSOPHY

AMI - STRONG PARTNER FOR YOUR COMPANY

AMI Förder- und Lagertechnik GmbH was founded in Alpenrod in 1987 and has been headquartered in Lückenbach in the Westerwald since 2012. We employ around 200 people and have significantly expanded our capacities in recent years, particularly in the areas of development and production. In factory halls equipped with modern machinery, we produce components and modules for systems and facilities for automated intralogistics with a vertical range of manufacture of over 87%. In addition, our portfolio includes robot-assisted units for manufacturing and assembly, as well as fully automated production lines for a wide range of industrial applications.

OUR SERVICES

BASIS FOR HIGHEST SYSTEM AVAILABILITY

- 24/7 on-call and on-site service
- Check, inspection and maintenance
- Highest availability of spare parts
- Training, courses, and vocational training
- Service and repairs

Ensuring maximum availability of all intralogistics components and systems is the focus of our comprehensive services - from remote diagnosis to on-site deployment.

AVAILABLE 24/7 and ON-SITE SERVICE

We are there for you 365 days a year. Modern technology offers our service team fast remote access to your system. In this way, possible problems are quickly detected and solved.

If a fault cannot be resolved despite telephone advice and remote access, our service technicians will be with you quickly and around the clock.

CHECK-UPS

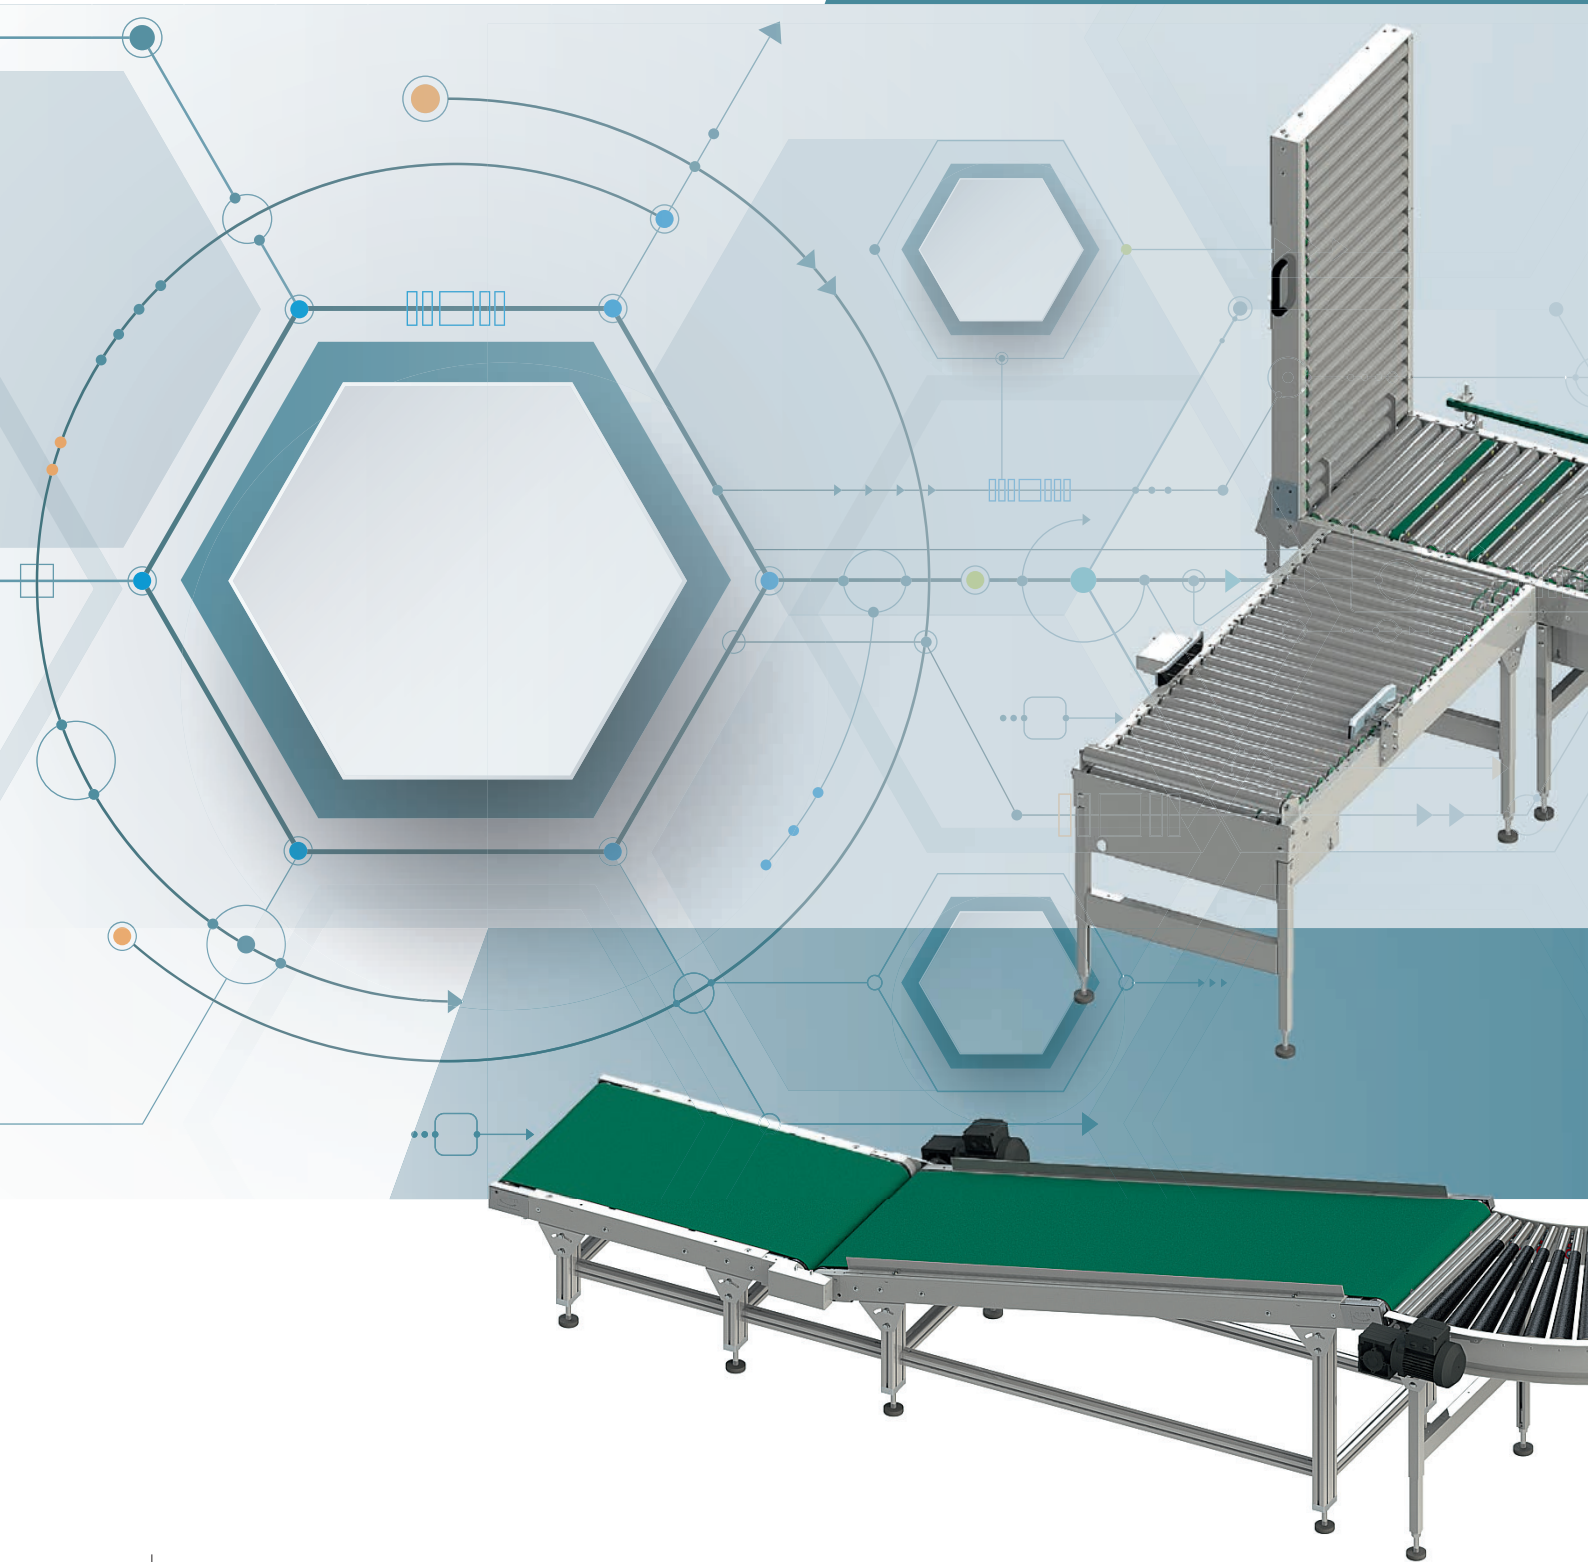

INSPECTIONS AND MAINTENANCE

A regular check-up, inspection or maintenance of your system avoids unscheduled downtimes, provides more flexibility when planning repairs and, above all, reduces maintenance costs.

Together with you, we develop inspection and maintenance concepts that fit your system.

Preventive inspection and maintenance concepts create the prerequisite for the safe operation of your intralogistics system, thus minimizing downtime and ensuring value retention; important elements for efficient system operation.

MAXIMUM AVAILABILITY OF SPARE PARTS

Since we produce the components of our systems almost exclusively ourselves, short delivery times are not a special feature for us – it is the standard. In this way, we ensure the availability of important spare parts both in the event of maintenance or repair and for retrofit measures. Together with you, we will develop the right strategy for your intralogistics system and the right concept for sustainable spare parts management.

The right mix of spare parts stocking and reliable and timely delivery is the key to smooth maintenance and servicing.

If desired, we can also conduct the training courses at your company. With training units individually tailored to your needs, we impart the necessary knowledge.

EDUCATION, TRAINING and EDUCATION

Well-trained and educated employees are indispensable for efficient and trouble-free operation, especially in automated intralogistics systems with a high degree of complexity, which ultimately also influences the competitiveness of your company. Together with you, we develop the right training program. Well-equipped training rooms, here in Luckenbach, support the work of our trainers, as do modern communication technologies and practical exercises in our technical center.

MAINTENANCE AND REPAIRS

Depending on the stress on your plant, the wear and tear of the components is correspondingly strong. We replace the critical parts and restore the original availability. If a normal replacement is no longer practical, we are also available to modernize your plant.

A well thought-out maintenance and repair strategy enables continuous analysis of the condition of your intralogistics system. This allows wear to be detected at an early stage and repair intervals can be determined.

WITH US YOU ARE IN GOOD HANDS

Contact us. We will work with you to develop a service concept tailored to your intralogistics system in accordance with your conditions of use.
